Company

People

The Master Blaster™ is one of the very few truly unique attractions for Waterparks, Family Entertainment Centers and Leisure Pools. Unlike conventional water slides the Master Blaster™ doesn't depend entirely upon gravity to move riders. Instead it uses patented water injection technology to actually boost riders up surprisingly steep inclines, delivering a roller coaster style ride full of gravity defying climbs, hair raising drops and thrilling twists and turns.

Products

As either a new build or a retrofit indoors or out, the Master Blaster™ has been proven in over 50 installations worldwide and is a valuable addition to any facility. It is safe and dependable too and with the inclusion of Aqua Leisures Ride Manager system, multiple ride sessions can be undertaken in a controlled manner.

The Master Blaster™ can also be used as a people mover, transporting riders in a continuous circuit from one water feature to another, enabling access to higher level entry points, increasing the riders enjoyment and reducing the amount of time your clients spend out of the water.
