The Tornado™ is an extremely thrilling, four person tube ride where riders accelerate down a steep 275cm (9ft) diameter tunnel before entering the base of the Tornado Funnel.

Their momentum allows riders to travel high up the opposite wall of the funnel, experiencing momentary weightlessness, before oscillating back and forth in the narrowing funnel towards the landing pool. Riders will then exit via a run out into a splash pool.

The Tornado™ comes in two sizes and can be completely enclosed if required. Special light, sound and water effects can also be added to create a truly unique and highly marketable attraction.
